

Aman Takher

SOFTWARE SUPPORT ENGINEER

Toronto, ON, Canada (Open to Remote) • 647-355-3339 • amanpreet.takher@gmail.com • linkedin.com/in/amantakher

SUMMARY

Software Support Engineer with 5+ years in customer-facing technical roles, resolving complex production issues for enterprise SaaS and data-management platforms. Strong in root-cause analysis using SQL and application logs (Grafana/Loki), Kubernetes/Helm troubleshooting, REST/SOAP APIs, and Azure cloud. Maintained a 96% first-response SLA and 4.8/5 customer satisfaction at Ataccama, and contribute to an AI/LLM-powered ticket-triage tool in production. Clear communicator focused on fast diagnosis and documenting fixes so issues don't recur.

TECHNICAL SKILLS

SQL & Databases: SQL, PostgreSQL, MSSQL, DB2, Azure SQL, CosmosDB

Cloud Data Platforms: Snowflake, Databricks

Identity & Access Management: Keycloak, Microsoft Entra ID, RBAC

Observability & Logging: Grafana, Loki (LogQL), Azure Monitor

Containers & Orchestration: Kubernetes, Helm, Docker, ACR

Cloud: Azure (Virtual Machines, Blob Storage, App Services), VPC & Subnets

APIs & Integration: REST, JSON, GraphQL, SOAP

Scripting: Bash, PowerShell

AI / Automation: Claude / Anthropic API, LLM-based ticket triage (RAG over Jira / Notion / Slack)

Ticketing & Collaboration: Jira, Salesforce, ServiceNow, Notion, Slack

Version Control / CLI: Git, GitHub, Linux / Azure CLI

EXPERIENCE

Software Support Engineer, Ataccama

Dec 2024 – Present

Remote

- Support enterprise customers on the Ataccama ONE platform, resolving 450+ technical support tickets across data quality, governance, metadata/cataloging, MDM/RDM, SQL databases, APIs, and cloud/hybrid (Kubernetes/Helm) environments.
- Perform root-cause analysis using SQL, application logs (Grafana/Loki, LogQL), REST/SOAP API testing, Linux commands, configuration review, and environment diagnostics to identify product, data, integration, and access-related issues — parsing stack traces, timeouts, and OOMKills across PROD-EU, PROD-US, and non-prod clusters.
- Troubleshoot data profiling, rule execution, job failures, authentication/authorization problems, platform performance, and deployment/upgrade incidents, including Kubernetes/Helm-based hybrid (DPE) deployments.
- Use SQL daily to investigate data and data-quality issues — querying and validating profiling/rule output, reproducing customer-reported discrepancies, and checking metadata and application-database state across PostgreSQL, MSSQL, Snowflake, and Databricks.
- Troubleshoot data-source connectivity and processing against customer cloud data platforms (Snowflake and Databricks), resolving connector/JDBC errors, authentication and permission issues, and pushdown profiling / data-quality job failures.
- Partner with engineering, DevOps, product, and customer success teams to resolve escalated incidents, reproduce defects, validate workarounds, and improve customer platform stability.
- Contribute to an AI-powered Slack triage bot (Claude/Anthropic API, live in production) that auto-classifies and routes incoming tickets and retrieves similar past issues across Jira, Notion, and Slack by error code/symptom to suggest root causes — reducing manual triage time and speeding first response.
- Maintain high-quality customer communication, SLA tracking, technical documentation, and internal knowledge-base content — sustaining a 96% first-response SLA and a 4.8/5 average CSAT rating while improving support efficiency and customer satisfaction.
- Active on the Ataccama Community — authoring knowledge articles and answering customer questions to deflect recurring issues and reduce repeat tickets lodged with the support team.

IT Operations Analyst, Esri Canada

Oct 2021 – Nov 2024

Toronto, ON

- Managed and administered SQL Server, optimizing database performance and executing complex SQL queries.
- Created Bash scripts to streamline processes such as log rotation, user account management, and data backup.
- Deployed Azure services including Azure Blob Storage, Virtual Machines, and App Services.
- Managed Entra ID and implemented role-based access control, enhancing security and compliance in cloud operations.
- Created and maintained custom PowerShell scripts to automate routine tasks such as SQL database maintenance.
- Installed, configured, and managed on-premises VM infrastructure using VMware vSphere.
- Enhanced system security by implementing advanced Azure security features and best practices.
- Reduced cloud infrastructure costs by 20% by implementing Azure Advisor recommendations and utilizing Reserved VM Instances.

Technical Support Specialist, BMO

Apr 2021 – Oct 2021

Toronto, ON

- Updated and managed the BMO RDC (Remote Deposit Capture) client application, ensuring clients had the latest features and security updates.
- Assisted clients with SQL-related queries and database management issues, ensuring accuracy and reliability of data transactions within the RDC application.
- Supported clients in integrating the RDC application with third-party systems using APIs (SOAP/REST).
- Developed and maintained a detailed knowledge base documenting common issues and solutions, reducing support tickets by 30% and speeding resolution times.
- Participated in on-call rotations, providing prompt support and resolution for critical out-of-hours issues.
- Worked closely with senior engineers and product teams to escalate and resolve complex technical issues.
- Provided technical support to clients throughout North America via phone, Zoom, and email.

Telecom Analyst, Mount Sinai Hospital

Jan 2021 – Mar 2021

Toronto, ON

EDUCATION

B.Tech, Software Engineering Technology — McMaster University, Hamilton	2024 – Present
Advanced Diploma, Computer Engineering Technology — Seneca College, Toronto	2018 – 2020

CERTIFICATIONS

Microsoft Certified: Azure Administrator Associate	Mar 2023
HashiCorp Certified: Terraform Associate	Nov 2023
Microsoft Certified: Azure Fundamentals	Dec 2022
CompTIA A+	Jan 2021
