

Aman Takher

SOFTWARE SUPPORT ENGINEER

Toronto, ON • 647-355-3339 • amanpreet.takher@gmail.com • [LinkedIn](#) • [GitHub](#) • [Takher.ca](#)

SUMMARY

Software Support Engineer with 5+ years in customer facing technical roles, resolving complex production issues for enterprise SaaS and data management platforms. Troubleshoot and debug distributed systems end to end, REST/SOAP web services, JSON and XML configuration, microservices on Kubernetes, SQL and cloud data stores using application logs, stack traces, and Linux CLI to get to root cause fast. Maintain a **96% response SLA** and **4.8/5** customer satisfaction at Ataccama, and contribute to an AI-powered ticket triage tool in production. Clear communicator focused on fast diagnosis and documenting fixes so issues don't reappear.

TECHNICAL SKILLS

SQL & Databases: SQL, PostgreSQL, MSSQL, DB2, Azure SQL, CosmosDB

Cloud Data Platforms: Snowflake, Databricks

Identity & Access Management: Keycloak, Microsoft Entra ID, RBAC

Observability & Logging: Grafana, Loki (LogQL), Azure Monitor

Containers & Orchestration: Kubernetes, Helm, Docker, ACR

Cloud: Azure (Virtual Machines, Blob Storage, App Services), VPC & Subnets

APIs & Integration: REST, JSON, GraphQL, SOAP

Scripting: Bash, PowerShell

AI / Automation: Claude / Anthropic API, LLM-based ticket triage (RAG over Jira / Notion / Slack)

Ticketing & Collaboration: Jira, Salesforce, ServiceNow, Notion, Slack

Version Control / CLI: Git, GitHub, Linux / Azure CLI

EXPERIENCE

Software Support Engineer, Ataccama

Dec 2024 – Present

Toronto, ON, Remote

- Own incoming support tickets end to end for the Ataccama ONE platform, **450+ resolved** - troubleshooting across multiple systems: distributed microservices on Kubernetes, REST/SOAP web services, SQL and cloud data stores.
- Debug production incidents by querying application logs with LogQL in Grafana, reading distributed stack traces, reproducing failures against APIs, and inspecting XML and JSON configuration, running Linux CLI and kubectl diagnostics, and querying databases directly to isolate root cause across clusters.
- Support software deployments, upgrades, and configuration changes in staging and production for Tier-1 customer environments, including Kubernetes/Helm hybrid deployments spanning cloud managed and customer managed infrastructure.
- Script in Bash and PowerShell and use SQL daily to validate system and data state and reproduce customer reported discrepancies across PostgreSQL, MSSQL, Snowflake, and Databricks; resolve JDBC connector, authentication, and permission failures against customer cloud data platforms.
- Inspect source code to explain behaviour customers can't see from the outside, for e.g. traced a persistent "object not found on import" to a native SDK pinned to an older vendor API version.

- Partner with engineering, DevOps, product, and customer success teams to resolve escalated incidents, reproduce defects, validate workarounds, and improve customer experience.
- Contribute to an **AI-powered Slack triage bot** (Claude API, live in production) that auto classifies and routes incoming tickets and retrieves similar past issues across Jira, Notion, and Slack by error code and symptom to suggest root causes, cutting manual triage time and reducing engineering workload.
- Sustain a **96% response SLA** and **4.8/5 CSAT** across North American and European customers.
- Create and streamline SOPs, runbooks, and internal knowledge base articles for recurring failure modes, and publish knowledge articles and answers on the Ataccama Community to deflect repeat tickets before they reach the queue.

IT Operations Analyst, Esri Canada
Oct 2021 – Nov 2024

Toronto, ON

- Managed and administered SQL Server, optimizing database performance and executing complex SQL queries.
- Created Bash scripts to streamline processes such as log rotation, user account management, and data backup.
- Deployed Azure services including Azure Blob Storage, Virtual Machines, and App Services.
- Managed Entra ID and implemented role-based access control, enhancing security and compliance in cloud operations.
- Created and maintained custom PowerShell scripts to automate routine tasks such as SQL database maintenance.
- Installed, configured, and managed on-premises VM infrastructure using VMware vSphere.
- Enhanced system security by implementing advanced Azure security features and best practices.
- Reduced cloud infrastructure costs by 20% by implementing Azure Advisor recommendations.

Technical Support Specialist, BMO
Apr 2021 – Oct 2021

Toronto, ON

- Updated and managed the BMO RDC (Remote Deposit Capture) client application, ensuring clients had the latest features and security updates.
- Assisted clients with SQL-related queries and database management issues, ensuring accuracy and reliability of data transactions within the RDC application.
- Supported clients in integrating the RDC application with third-party systems using APIs (SOAP/REST).
- Developed and maintained a detailed knowledge base documenting common issues and solutions, reducing support tickets by 30% and speeding resolution times.
- Participated in on-call rotations, providing prompt support and resolution for critical out-of-hours issues.
- Worked closely with senior engineers and product teams to escalate and resolve complex technical issues.

Telecom Analyst, Mount Sinai Hospital
Jan 2021 – Mar 2021

Toronto, ON

EDUCATION

B.Tech, Software Engineering Technology — McMaster University, Hamilton
2024 – Present

Advanced Diploma, Computer Engineering Technology — Seneca College, Toronto
2018 – 2020

CERTIFICATIONS

Microsoft Certified: Azure Administrator Associate
Mar 2023

HashiCorp Certified: Terraform Associate
Nov 2023

Microsoft Certified: Azure Fundamentals
Dec 2022

CompTIA A+
Jan 2021
